It is my pleasure to introduce this year's publication introducing Slovakia's economy, culture, regions, towns and companies to the audience abroad. Friends of Slovakia and all those interested in the affairs of our country – the attractive and welcoming heart of Europe – are well aware of its hospitality, wonderful nature, dynamic economy, and friendly business environment. Slovakia is fully integrated into the European Union within the borders of the visa-free Schengen system and with euro as its currency.

Slovak government did its utmost to weather economic crisis in the past few years. In parallel with keeping public finances sound, its answer to the crisis sums up in the "more innovation and competitiveness" drive. Slovakia has recorded solid economic results:

- one of the fastest growing economies within the EU in the last decade (2002-13 4,5% /year),
- one of the lowest public debts in the EU (58% of GDP),
- budgetary deficit under control below 3%,
- trusted by markets.

Nevertheless, we do not see these results as a reason for complacency – our aspiration is to give an added value to our economy, reflecting global trends. The Government is keen to on further improving business environment in Slovakia to help both the domestic and the foreign entrepreneurs. Our ambition is to implement effective economic policies and to ensure social and economic stability with the overall strategy based on European values. Through this strategy, we wish to balance our economic competitiveness with social responsibility gradually reaching the standard of living on par with the most developed EU countries. We realise that these goals can only be achieved by improving the business and investment environment.

Economic diplomacy under the new competencies of the Slovak Ministry of Foreign and European Affairs (MFEA) represents an important pillar of this effort. One of the roles of the Slovak Foreign Service is to facilitate international partnerships and identify prospective areas of international cooperation. Our vision is to transform economic diplomacy into a service for the entrepreneurial sector enabling the identification of main trends in the world's economic developments in time and responding to specific needs and suggestions of entrepreneurs. Business Centre has been established at the Department of Economic Cooperation of the MFEA. It coordinates the economic informa-

tion flow in the triangle formed by our diplomatic missions abroad, the Slovak entrepreneurs and other public and private bodies.

Our answer to the crisis in Slovakia is "MORE INNOVATION" – we established the Government Council for Science, Technology and Innovations and we prepared the National Strategy related to the EU project of Smart Specialisation Strategy 2020. Its aim is to initiate a strategic shift in the Slovak economy towards a growth based on innovation and excellence in R&D. I have high respect for the Slovak inventiveness. The Ministry of Finance is preparing a package of tax stimuli to support innovation.

Slovakia will maintain its strengths, priorities and reputation of a credible partner. We are interested in strengthening our contribution, presenting ourselves as a country with a stable place in the international community, and also as a nation able to significantly contribute to positive economic activities and globalisation trends.

The MFEA will continue to work for the benefit of transferring good foreign practice in the interests of establishing Slovakia as one of the most attractive places for investment in the EU. In this regard, the nature and importance of individual factors that influence the past, present and future decision-making of foreign investors regarding their entry into the economic and social area of Slovakia is important. The quality of the business environment, overall institutional and legal bodies, and the allocation and redistribution framework in Slovakia, will unquestionably become more attractive in coming years. We thus expect a higher influx of direct foreign investments, mainly into areas with higher added value.

We acknowledge further challenges ahead to ensure the long-term competitiveness of Slovakia. The Government therefore plans a series of specific measures to create the conditions for the development of a knowledge-based economy. We will strive to ensure that our economic growth is based on the development of areas that will support the growth of the creative potential of the Slovak economy, such as human resources and education, information society, and the support of research and technological development.

Dear readers, I am sure that this publication will give you a handy and well-arranged summary about Slovak business environment including contacts to start your effective communication with potential partners in Slovakia.

Miroslav LAJČÁK
Deputy Prime Minister and Minister of Foreign and European Affairs of the Slovak Republic

"Promoting Economic Growth and Slovakia's External Economic Relations"

Slovakia is an open economy the competitiveness of which is largely dependent on the development of the economies of the country's business partners and on the sale of goods abroad. Despite the global crisis, Slovakia has preserved a positive foreign trade balance. During the first three quarter-years of the last year, the foreign trade balance reached EUR 3.8 billion. It is the highest value ever in the history of the Slovak Republic. Exporters rightly understood the crisis as a challenge, and have been able to sell their products on third markets.

This corresponds to the efforts of the Slovak Government which declared in its Manifesto that it would stimulate economic growth and employment. In order to support the development of the Slovak economy, the Ministry of Economy in cooperation with other ministries and representatives of business organisations prepared the document *"Economic Policy Measures to Promote Economic Growth"*. Our intention was to prepare pro-growth measures aimed to improve the business environment along with the consolidation of public finances and Slovakia's commitment to reduce the public finance deficit under 3% GDP.

Pro-growth measures have adopted in six areas. The first one are measures related to the promotion of entrepreneurship and investments by creating a Slovak fund for the enhancement of growth and improving the conditions for small and medium-sized enterprises through securing a better approach to financing the risk stages of business activities. For example, we introduced a simple instrument – innovation vouchers – to intensify cooperation between small and medium-sized enterprises and selected scientific and research departments. It is a form of money voucher at a value of EUR 3,500 (small enterprises) or EUR 10,000 (big enterprises) aimed to cover the entire or partial costs of services concerning innovations provided by selected contractors. We also want to focus on activating the capital market, on the strategy of reducing the regulatory burden of entrepreneurship, and on increasing the legal certainty of entrepreneurs.

With regard to the enhancement of employment, we have programmes in place for the promotion of youth employment and the maintaining of jobs, and a programme of employment for handicapped and long-term unemployed people. This area represents efficient activities related the public administration and management of the state's financial assets, such as public administration reform aimed to ensure higher efficiency, effectiveness and transparency, known under the acronym ESO (E – efektívna /effective/, S – spoľahlivá /reliable/ and O – otvorená /open/ state administration), or fight against tax frauds and tax evasion. The measures aimed to promote education, science and research focus, for example, on the building of university parks and academic centres. Through measures resulting in timely launch of large infrastructure projects we would like to invest public finances in the development of the network of highways and motorways, and in the

modernisation and construction of national and regional transport and technical infrastructures. The sixth priority area concerns export promotion measures. The aim is to diversify exports by concluding new free trade agreements, support the export performance of the SR by involving Slovak entities in inter-governmental and inter-ministerial commissions and international cooperation, ensure higher involvement of the state administration representatives in advocating export interests, enhance the international promotion of Slovak companies, and establish foreign representative offices of the Slovak Investment and Trade Development Agency (SARIO).

The Ministry of Economy in cooperation with the Ministry of Foreign and European Affairs has already adopted measures to improve the organisation of official participations at fairs abroad and the organisation of inter-governmental and mixed commissions for economic cooperation. All measures have been incorporated in the wider framework *Strategy of External Economic Relations of the Slovak Republic 2014–20*, already discussed by the Government of the SR. The primary aim of the strategy is to define the pro-export policy in the next years. The strategy focuses on making the national system of export promotion more efficient, and to harmonise it with middle-term trends within the external economic environment by 2020 and with the interests of the business sector.

For example, the single way of promotion should be improved by higher efficiency of the information support of export. This will be achieved by creating an integrated information system inter-connecting all relevant information on support services for exporters, as well as information on foreign markets. The system will be administered by SARIO through the transfer of information to business associations and organisations.

Besides EU funds, the financial instruments are represented by bank and insurance products provided by EXIMBANKA SR and Slovenská záručná a rozvojová banka. Both institutions dispose of financial products aimed to stimulate export, including special focus on the group of small and medium-sized enterprises.

It will be inevitable to receive feedback from exporters as an invaluable input for the improvement of the entire system to be considered in the planned revision of the strategy – White Book on Pro-Export Policy in 2017. Besides the duration of the programming period, the timing of this revision corresponds to Slovakia's participation at EXPO 2015 in Milan and its presidency of the EU in 2016 as an important part of Slovakia's economic presentation.

I believe that the White Book will create the space for the adjustment of objectives and adaptation of instruments until the end of the programming period, especially in the case of structural instruments financed from EU funds.

Dear readers and Business Partners,

I am very proud to be a part of this booklet which assembles the most important of Slovakia in one place at one time providing high-quality information.

This booklet is a great opportunity for Slovakia to present itself because this country, despite financial and economic crisis all around the world, still has one of the highest predictive GDP for 2014 among EU countries and the highest productivity within Central and Eastern European countries.

Slovak Investment and Trade Development Agency (SARIO), especially in recent years has been trying to contribute to the success of the Slovak economy.

SARIO operates under the Ministry of Economy of the SR and is based on two pillars. The first one is to support the infl ux of investments considered for Central and Eastern Europe for Slovakia with the main aim to create new jobs. And the second one is to support export activities of Slovak companies on the global market.

Since the Iron Curtain fell, Slovakia has been profiling itself as a key commercial location. Numerous international companies are manufacturing in Slovakia: over the past decade, the likes of VW, Peugeot, Kia, IBM, Dell, Samsung and dozens of other major companies have discovered Slovakia to be a production location.

Slovakia currently has a reputation as an ideal destination for manufacturing plants, but there is undeniable potential for technological superstructure and investments with high added value. The basis of this success is represented by a qualified workforce - according to the statistics from the European Commission 93% of the Slovak population has secondary or higher education and 80% of the population speaks a foreign language.

Slovakia also has the advantage of high efficiency and labor productivity which is the highest of all

the countries in Central and Eastern Europe. The high level of productivity is a key indicator for investors' decision-making process, where to place its planned investment among other e.g. strategic location with great export potential, political and economic stability and level of infrastructure network.

It is understandable that one of our priorities is to locate new investments and encourage existing investors especially in regions with high unemployment. SARIO also wants to contribute to reduce regional and social disparities. The inhabitants of these regions, as a result of new foreign investments and expansions, are given the opportunity to find a job.

We also actively help Slovak companies. SARIO has a separate department, which provides full service to companies with a view to their integration into the international business network in order to increase their export potential.

Symbiosis based on the influx of new investments and a strong base of domestic enterprises with export potential will create a strong economy, from which we all benefit.

We wouldn't have achieved this success without our leading project Business Friendly Slovakia which lately has become the motto of our work. To the credit of this project, initiated by SARIO, Slovakia is widely seen as a success model for other EU countries for creating an investment and business-friendly environment.

To conclude, I would like to mention that in 2011 we took some steps in the right direction in order to achieve our aim: supporting the development of the Slovak economy as much as possible which will be reflected in new jobs and in increased standard of living in Slovakia. My colleagues and I continue these efforts with the same or even greater intensity in 2014 and following years.

Robert ŠIMONČÍK
CEO of SARIO

SARIO

Dear readers,

I am very glad to have this opportunity to address you in this way and present the current objectives and ambitions in Slovak education, as well as the challenges it faces in relation to meeting labour market needs. The position of the Ministry of Education in this field is very important, since the training of tomorrow's specialists begins in the classroom of today. It is necessary to view the Ministry as a department with an economic role; and it should, therefore, modify its focus and goals whenever need be.

Crucial in this regard are the steps we are taking to introduce elements of the model of the dual system of vocational education and closer linkage between schools and employers. It is in cooperation with them that we want to prepare school-leavers ready to compete in the labour market. This is a current challenge not just for Slovakia, but for Europe as a whole.

This process, which is expected to lead to secondary schools being better focused on preparing pupils for occupations required in the labour market, was confirmed by the ratification of the declaration of education ministers at the Berlin summit in December 2012. In April 2013, a national conference on the dual system of vocational education was held in Bratislava with international participants, at which we then adopted a declaration proclaiming the launch of systemic, legislative, action, substantive and project measures for the progressive introduction of elements of dual education in our country, and this in close cooperation with partners from abroad: Germany, Austria and Switzerland.

In this context it will be crucial for us to complete in 2014 the preparation of a new law on vocational education and training in close and intensive cooperation with employers. In addition, for supporting this objective, we are implementing three major national projects financed from EU funds, focused on orientating primary school pupils on professions, on verifying the dual system of education and on digitising education content, as well as on creating the National System of Qualifications and revising the National Qualifications Framework.

Our intention is to start with vocational education right at primary school in enhanced lessons of polytechnic education. This must be focused on developing pupils' work skills and finding the most suitable professions corresponding to their abilities. The project focuses on primary-school pupils deciding their future career path, selecting a particular occupation and, ultimately, also selecting their secondary school. There are also major cross-border projects with Austria, a consisting in Swiss – Slovak cooperation project, activities under the Danube Strategy or bilateral conventions with partner ministries of countries that have established the dual form of vocational education, particularly Germany.

I am very pleased that representatives of employers, employees and secondary school founders are participating in all the changes that we have prepared to date, as well as in those that still lie ahead.

In order for this cooperation to work effectively, we need to introduce elements of the mentioned model of dual education that are motivating for employers and concurrently ensure the necessary quality of vocational education. The model, in which the employer will be a subject offering school pupils jobs for their dual education. The employer will thus be the customer for the theoretical instruction of a pupil with whom it has a tuition contract concluded. Since it is likely that the employer will later employ some pupils with whom it has a tuition contract, it selects only quality vocational schools. This process thus brings about an improvement in the quality of the network of vocational schools, because schools with which employers have no interest in concluding contracts on the dual education of pupils will naturally fail or go into decline. Employers, in addition, have the opportunity to support selected students by motivational scholarships, which also increases the attractiveness of vocational education.

We have the necessary starting points in place for implementing this system, and can rely on them. Already today we can boast some good examples of cooperation, for example the Private Secondary Vocational School of Metallurgy in Podbrezová with the local ironworks, or the Private Secondary Vocational Technical School in Žiar nad Hronom with firms associated in InTech Žiar nad Hronom. A further notable example is the cooperation established between the Secondary Vocational Technical School in Kysucké Nové Mesto and the firm INA Kysuce, as well as secondary vocational schools in the Košice self-governing region with relevant employers.

The greatest degree of cooperation between schools and firms is seen in the provision of practical teaching according to the employer's requirements at their workplaces. It is precisely this sort of teaching that enables pupils to be in direct contact with the latest technologies and it significantly facilitates their transition from school into work. This system, in which it is usual to gain work experience at a firm and then, after completing school, to find employment at that firm, is what we want to establish in vocational education and training throughout Slovakia. It will serve to develop the economy, as well as benefit youth employment. And this is essential; all the changes we are making are for the success of children, pupils, students as well as their parents' happiness.

Levoča – the Town of Opportunities

The history of Levoča proves its special status. In 1721, the town became the capital of the Association of Spiš Germans. In the 14th century, Levoča was awarded the status of a free royal city. The economic development of the city was immensely influenced by granted privileges, the most important of them being the storage right. Due to the

free royal town is manifested in a number of well-preserved town houses, religious buildings and sites, and an extensive fortification system. The life and works of Master Paul are also linked to Levoča. Master Paul created the highest wooden Gothic altar in the world – the main altar in the St. James's Church. The town's development slowed down in the 16th–18th centuries due to uprisings of the nobility and the Turkish expansion.

Thanks to its role and geographical location, Levoča naturally transformed into the historical, cultural, social and economic centre of the Spiš region. It is actively involved in the development of recreational, cultural, congress, religious and sports tourism.

accumulated capital, the Town of Levoča became the Central European centre of trade. The wealth of the burghers of the

In the 19th century, Levoča became the administrative centre of the Spiš county.

City of Levoča retained the architectural features of a medieval town which is one of the most beautiful historical town reserves in Slovakia. In 2009, Levoča became listed as a UNESCO World Heritage Site as part of the area "Levoča, Spiš Castle and cultural monuments of the surroundings".

The Town of Levoča has good conditions for industrial development and **offers free space capacity for businesses in the Brown Industrial Zone of Levoča - South** with the possibility to build own industrial halls and buildings connected to the recently developed technical infrastructure. The total area of the **Brown Industrial Zone Levoča – South** is 119,868m², which provides space for running business in

manufacturing industry, technology centres and centres of strategic services. The Zone includes the existing Hall M4 and vacant spaces with a total area of 32,000m². The Brown Industrial Zone Levoča – South is located south of the town centre with developed transport infrastructure and developed technical infrastructure.

tacularly tarns surrounded by jagged alpine peaks.

High Tatras provide facilities which are more than comparable with other famous international resorts. Although not as high as the Alps, this beautiful mountain region offers a similar broad range of activities such as hiking, climbing and skiing. The clean air, sunny weather and traditional Slovak hospitality, as well as a wide spectrum of comfortable

tourist accommodation and sporting amenities, are a major attraction for people from different countries of the world.

Town Poltár

Poltár is located at the foot of the Slovak Ore Mountains in the north-east of Lučenec Basin.

On the territory of present city Poltar there were the Slavic housing findings from the 7th century, the foundations of a medieval bulwark at Ceriny, the remains of the Late-Roman church foundations at Kostolisko. The village has developed from an older settlement. The old and foreign names of the village were: Nagpolthar, Felsupolthar, Kyspolthar, Varalyapolthar (1409), Polthar (1439); Hungarian Poltár. The city and its surroundings are suitable for both the summer and winter tourism. The city has built a modern swimming pool with large grounds and additional services. The fans

and Methodius. An old stone bridge over the river Ipeľ, the technical monument, is the local attraction.

self-government prepares annually a variety of cultural, social and sports events for residents and visitors. Close to the city, near the site Kúpná Mine there are the rare and protected species of plants. The interesting historic monuments include a classical mansion from 1782, which was later rebuilt in a Neo-Gothic one. Then there are the protestant churches - in Poltár, built in 1791, in the part Slaná Lehota in 1869 and in the part Zelené in 1835 and the Roman-catholic church of Cyril

of rural tourism and cycling, riding, fishing and hunting come to their own. The city has prepared the accommodation, catering and additional services for tourists. The local

Šamorín

The exact time of the town's beginning is not known.

According to Matthew Bél and other well-known historians the town was named after the church erected in honor of the Blessed Virgin Mary. It was first mentioned as Villa Sancta Maria in records dating from 1238. Its later name was Zenthmaria (1287), later Samaria which is the basis of the present name. The symbol of Virgin Mary is often depicted in the emblems of Šamorín: in its coat of arms, flag or on the town seal from 1405.

In 1405 King Sigismund granted the town with the right of a Royal Free Town. Šamorín enjoyed all the same rights as Bratislava at that time.

Battles with the Turks in the second part of the 6th century put an end to the town's steady development. In 1465 it lost its Royal Free Town status and was demoted to be a Market Town. Only later in the beginning of the 17th century Šamorín regained its role as an agricultural and trade center of the Upper Rye Island.

Towards the end of the 19th century Šamorín has grown to a middle-class town. Several educational and cultural institutions were established: a state-funded school in 1872, the Volunteer Fire Brigade in 1873 or its Brass orchestra in 1875.

During and after the World War I. there was a prison camp for captured Italian and Russian prisoners of war. Memorials pay honor to them in the local cemetery.

About 70-80 Jewish families lived in the town until the World War II. They had their own rabbi, chorister, school and teacher too. Nearly all Jews were deported and killed in 1944.

The town's landscape was drastically transformed during the Communism. Vast portion of the historical town center was demolished to make room for high-rise buildings with hundreds of apartments.

Until 1960 Šamorín was a district seat, and then it became the part of the Dunajská Streda district and Trnava county. The town's population is currently over 13 000 with majority of Hungarian nationality.

450 various firms and nearly 50 non-profit organizations are located in Šamorín employing people and contributing to the town's further development. Since 2004 an Italian industrial park has being built with 15-20 investors participating (Calearo, Eltra ...).

Cultural, ecclesiastical and secular heritage

The Reformed Church: one of the oldest and most beautiful Gothic churches in the Rye Island Region. It was built in the 13th century in late-roman style and still has original frescos.

The Roman Catholic Church and Monastery: they

were built according to the plan of J. G. Altenburger between 1722 and 1778 by Minims (Paulinians) and are significant monuments of the late-baroque style. It was the only Minim monastery in the Hungarian Kingdom. The organ of the church was built by the most famous organ maker at that time Ludwig Mooser in 1866.

The Evangelical Church was built in 1875 in classicistic

style. The Slovak statesman, diplomat and scientist Milan Rastislav Štefánik was a student in the local Evangelical school in 1889-90.

The Roman Church in Šamorín: it was built around 1260 in roman style and bears the name of St. Margaret.

The Synagogue was built in 1912. In the years of socialism it was disgracefully used as a warehouse. Today it gives a home to the multi-art foundation called At Home Gallery. The center has acquired national and international publicity in areas of contemporary fine arts, music and eurhythmics. The Gallery was visited by His

Holiness the 14th Dalai Lama in 2000.

The Town Hall is situated on the Main Square of the Town. The original roof and tower were destroyed in a fire in 1836. There was a known and unhealthy prison under the building.

Recreation and other local sights

The river Danube is visited mainly for recreational activities. A brand new aqua park, wellness, sport and congress center will be opened in 2015.

One of the most significant European bicycle routes can be found on the levee of the river and gives easy access to the nearby villages, Bratislava, Vienna or to Hungary.

Culture and sports in the town

Several folk and art groups work in the town. E.g. the Csalló folk art group, the Csali and Prvosienka children folk dance groups, the HID (Bridge) choir and different bands play modern music.

The first soccer match was played in 1912. The STK (Local Association of Exercisers) was established in 1914.

Other clubs: tennis, kayak-canoe club (the best club in Slovakia), the famous fencing club, Gladiator Club for wrestlers, basketball team – the local women team plays in the Slovak First League Championship.

From the 1970s Šamorín is also famous for its horse racing which drew many visitors to town.

THE TOWN OF SPIŠSKÁ NOVÁ VES

Gateway to the Slovak Paradise

Slovak Republic, Europe
N 48° 56' 39,01"
E 20° 34' 0,32"

Spišská Nová Ves with its more than 745-year long history is an ideal starting point for the lovers of hiking along harsh but picturesque gorges of the Slovak Paradise

The town features the longest fusiform square in Europe with an unforgettable atmosphere, the highest publicly accessible church tower in Slovakia (87 m high), the youngest ZOO in Slovakia. At the Place of Wishes you can express your most secret wishes and send them by ringing a bell to the heavenly heights to be fulfilled. A rich offer of cultural and sporting events all year round provides

skating rink, a minigolf or an indoor shooting range, as well as suburban sports airfield with an opportunity to enjoy parachute jump or sightseeing flight.

In the close vicinity of the town are situated the longest river canyon in Slovakia, the largest Slovak ice cave, 25 splendid waterfalls in 8 accessible rocky gorges, 300 km of marked tourist paths, 400 km of cycling

(Slovenský raj) National Park, for the admirers of monuments included in the UNESCO's World Heritage List and for those interested in inconspicuous but even more precious Gothic and Iron Routes monuments, that can be found in the surrounding Spiš region.

sufficient opportunities for a pleasant stay. Attractiveness of the town is enhanced by theatres, a gallery, museums, 3D cinemas, indoor swimming pool and a lido, wellness centers, tennis courts, a skittle hall, a high rope park, a skate park, a synthetic ice

tracks, cross-country ski trails or an educational mining path.

The combination of nature, history and active relaxation in the middle of the Spiš region are complemented by other available natural beauties: first of all the High Tatras (Vysoké Tatry) National

Park, which is just 30 km away, but also thermal park in nearby Vrbov, the Pieniny National Park with its raft tours of the Dunajec river on traditional Goral rafts, the caves of the Slovak Karst (Slovenský kras) National Park or the metropolises of Prešov and Košice located in very short distances.

An increasing interest in Spišská Nová Ves is reflected every year in the growing number of its visitors, services concentrated not only in its centre and also in increased business activity.

Take an opportunity to enjoy advantageous family, romantic or adrenaline stay in Spišská Nová Ves.

'Family stay full of experiences' (3-day package for families) includes the accommodation in the hotel** with breakfast and family

dinner at the day of arrival, free entry to lido and indoor swimming pool during the whole stay, Ceragem massage, ascent to the highest church tower in Slovakia, visit of the Place of Wishes, free entry to the ZOO and AQUATERRA pavilion with a small present for your children and free entry to MONKEYLAND high rope park.

'Romantic stay in the metropolis of the Spiš region' (3-day package for couples) wants to pamper you and your beloved one by the perfect accommodation, catering services and relax in wellness centre of the hotel***, provide you with romantic moments during the dinner in the acclaimed stylish restaurant NOSTALGIE in the historical

center of the town, as well as to enable you to express your common romantic desires or touch one of the oldest medieval bells in Slovakia at the unique Place of Wishes.

'Weekend adrenaline menu with the sky' (3-day package for 2 persons) offers you an opportunity to 'rent' the sky and enjoy 20-minute

flight by a Cessna aircraft with views of the picturesque Slovak Paradise National Park, the majestic High Tatras, historical town Levoča or the Spiš Castle, and afterwards experience a tandem parachute jump from a height of 3,000 m with an experienced instructor. You can also test your strength and courage in the latest high rope park or test your shooting talent and accuracy at the indoor shooting range from 3 weapons of your choice. You can take 155 steps for an amazing view from the highest church tower in Slovakia, experience the atmosphere of the longest fusiform square in Europe and enter the nearby Slovak Paradise. Bed and breakfast accommodation in guest-house*** included.

Find out more about packages in TIC or on website of the town.

Detva

DETVA is situated in the heart of Slovakia, about 220 km from Slovak capital Bratislava.

Its area is known with precious natural and cultural values. Detva is the centre of Podpolanie region, one of the most original Slovak regions, which was named after natural dominant feature of the area – Polana volcano. From 1996 Detva is the centre of the district. Its area is 6,809 hectares and it has about 15,000 inhabitants.

Geographical location of Detva in the centre of Slovakia enables good traffic connection with the

neighbouring regions as about roads and railways. The road I/50 (Bratislava – Zvolen – Lučenec – Košice) is the traffic axis of the area. It will be soon improved by building the R2 highway. Detva is connected with the railway line Zvolen – Lenártovce – Košice, which runs through southern part of the town. The nearest cargo railway stations are in neighbouring villages Víglaš and Kriváň. Airport in Sliač is only 27 km from Detva.

Good technical and civic infrastructure is available in the town. In the Strategy of Slovak Republic Improvement Detva is one of innovative progress poles.

Business and employment support is one of the priorities so

that the new business zones are being created.

With the EU support of its structural funds (2004–2006) Detva town realized reconstruction of some producing parts in PPS factory so that it prepared industrial park for some new investments and for the creation of 538 job positions, mostly in engineering professions.

The goal of building of industrial parks and zones for business in Detva and surrounding villages Kriváň and Víglaš is to provide the opportunities for domestic and foreign companies with working places in production, service and quaternary sectors, so that for domestic companies' goods and services consumption.

Detva town owns also allotments of 10 ha area, which is considered to be the future industrial park Detva – Trstená. There is the project documentation prepared for this business plan for building the underground services.

In southern part of Detva there are some areas and building sites of stores, services and production. This site is the most lucrative as about the connection with infrastructure but it is capacity limited because of planned road R2 and also because of limits of protective zones biotopes around Slatina River.

They say that the potential of Detva and its surrounding is not used properly. There is a good opportunity not only for visit and getting known of this region but also for investment into business and living in this environmentally pure, clean and beautiful town in the heart of Slovakia.

The town of Zvolen

Zvolen is one of the oldest towns in Slovakia. Owing to its advantageous geographical position and favourable natural conditions its area situated at the confluence of the Hron and the Slatina rivers in the southwest part of the picturesque Zvolenská kotlina valley basin was settled already in prehistoric times. After the Tartar

invasion he renewed its privileges on 28th December 1243 and so the settlement was upgraded to the category of royal towns for good. Nowadays the distinguished past of the town and especially frequent royal stays in the Middle Ages can be traced in its most important historical dominant sites – **Zvolenský zámok (Zvolen Castle)** and **Pustý hrad (the Deserted Castle)**. The central place of the town is

The Deserted Castle

Námestie SNP (Square of the Slovak National Uprising) with the **pedestrian precinct** which, with its area, belongs to the largest ones in Central Europe. In the territory of the town are found not only several significant cultural monuments, but also valuable communities of fauna and flora and unique natural formations. The large collection of coniferous and deciduous woody species, roses and succulent plants is concentrated in the area of **Borová Hora Arboretum**. Zvolen and its surroundings are also known for great concentration of mineral

springs and in the proximity are situated popular spas of Sliač and Kováčová.

Town Hlohovec

Hlohovec is economic, cultural and administrative centre of the region. It is situated in Western Slovakia, it is a part of Trnava Self-Governing Region. The distance from the capital city of the Slovak Republic Bratislava is 60 km. There are around 22,000 inhabitants in Hlohovec.

The first written evidence of its existence dates back to 1113 – the castle and the hamlet called Golguz are mentioned in the so-called Zobor Document. In 1362 Hlohovec obtained town privileges. During the feudalism Hlohovec was the centre of trade, developed crafts, and the town was famous for its markets and fairs.

The most significant architectural sights include a Renaissance-Baroque castle surrounded by a large castle park with French terraces, the Empire theatre built in 1802, the Church

of St. Michael Archangel, the Chapel of St. Anna, the Church of St. Spirit from 14th century and the Franciscan monastery with the Church of All Saints.

The town develops peer activities with its twin towns – the Belgian town of De Panne, the Czech town of Hranice, and the Slovenian town of Slovinské Konjice.

Tvrdošín

Tvrdošín is located in the north of Slovakia. It is not only the oldest town in the Orava region, but also one of the 20 oldest Slovak

towns. It serves as the cultural, social, administrative, economic and recreational centre for the whole Tvrdošín region. There are several historic landmarks in Tvrdošín, among which the Wooden Gothic Church built in the 15th century is the most important one. This cultural heritage has been successfully conserved recognized even by the pan-European organization Europa Nostra. Since 2008 the church has been a part of the UNESCO world heritage list. Another popular tourist attraction is Maria Medvecká Gallery. Maria Medvecká, was a nationwide recognized painter. In town you can find one more gallery - Schürger Art Gallery. It is a place where the Orava rafting route starts.

The recreational centre Oravice (located in the town part bearing the

Wooden Gothic Church of All Saints

same name) is the most well-known tourist attraction in the region. The site is surrounded by mountains which offer hiking opportunities of levels ranging from easy to alpine hiking, cycling routes and also ski slopes. There are also all year round working swimming pools exploiting geothermal sulphate-calcium-magnesium water with high content of iron, which has beneficial effects on musculoskeletal diseases. The complex includes an aqua park offering various rehabilitation services.

The attractiveness of the site rises thanks to the fact that it is a protected natural environment with precious fauna and flora. In the town surroundings there are far more interesting places to see – the Orava dam, Western Tatras – Roháče, a famous Polish town Zakopane and much more.

Oravice

Snina

The City of Snina (216 m.a.s.l.) lies in the heart of a virgin nature, at the confluence of rivers Cirocha

and Pčolinka, surrounded by its landmark and symbol of the city - the mountain Sninský kameň (1005 m.a.s.l.).

Snina is a part of the region Horný Zemplín. It is also an entering point of hiking and biking trails in the Protected Landscape Area Vihorlat and Poloniny National Park, embracing nature reservations, recorded in the UNESCO World Heritage List in 2007.

The City of Snina has 20,500 inhabitants. In recent years it has been changing its face mainly due to reconstruction

and new construction projects, such as new city square, schools' renovations in 2013 and a restoration of a classical mansion of 18th Century, including a historically eminent statue of Hercules and the Old Park.

Sninské Rybníky, a pound, located only 3 km from the city center, has become an important touristic attraction of the region. Particular importance belongs to the bio swimming pool that operates on water purification basis, using natural aquatic plants and algae, situated on 3510 sq.m., with three profound zones from 10 to 300 cm.

Air transport

There are 6 international airports in Slovakia that can be used for both passenger and cargo flights:

- M.R.Štefánik airport Bratislava
- Airport Košice
- Airport Poprad-Tatry
- Airport Sliač
- Airport Piešťany
- Airport Žilina

As the potential of Slovak airports is not yet fully exploited, regular and also irregular connection of Slovakia to Europe and the rest of the world is secured through Vienna Schwechat airport. Schwechat airport is the main international airport of Austria and is only 50 km distant from Bratislava. There is also regular train and bus connection between Bratislava and Schwechat. Another large international airport accessible is Budapest airport, main airport of Hungary, distant 250 km from Bratislava. It is also possible to use airport Ruzyne in Prague that has regular flights to M. R. Štefánik airport in Bratislava.

Airport M. R. Štefánika Bratislava (BTS)

823 11 Bratislava

Viper SD-4

*...choose the best
for yourself from Slovakia*

Why Viper SD-4

- An all-metal design of the plane - low costs of operation and comprehensive maintenance
- A strong and robust metal construction increases the safety flight and a long life time of the plane
- A spacious cockpit with excellent look ensures a comfortable and pleasant flight
- Top flight characteristics of the plane - ideal for the experienced pilots and flight schools
- The latest avionic technologies - wide utility options, excellent quality properties
- A low fuel consumption, minimum operation costs

SLOVAK POLYSTYRENE PRODUCER

Company IZO4 Ltd was established in 2004. Company is located in the Eastern Slovakia. It is one of the market leaders in area of producing and processing of polystyrene in Slovakia, and probably the largest Slovakian producers.

IZO4 Ltd specializes in production of thermal and sound insulations from expanded polystyrene, launching the first products to the market in year 2005.

Currently the production volume is 400 000 m³ per year, and still rising. This success was achieved thanks to perfect equipment from German company Erlenbach, and perseverant customer care.

Main aim of the company is to sustain, and even strengthen its position on Slovakian market, with innovative methods of implementing the expanded polystyrene in construction processes. New investor entered the company in 2012, and currently all the processes are set up to fulfill the designated aims.

MicroStep®
spol. s r.o.

COMPLEX CNC CUTTING MACHINES ▶ cutting of sheets, pipes, profiles, domes, elbows
 ■ combination of technologies on one machine ■ wide range of additional accessories
 ■ material flow automation ■ CAPP applications for production management ■ CAM software ■ robotic applications

PLASMA / LASER / OXYFUEL / WATERJET / DRILLING / TAPPING / MARKING

Since its inception in 1991, the company MicroStep, spol. s r. o. has been involved in design and manufacturing of CNC cutting machines equipped with plasma, laser, oxyfuel and waterjet technologies as well as routing and drilling machines. Over the years the company has become one of the leading suppliers of cutting equipment and has supplied more than 1,700 machines worldwide in cooperation with strong channel partners spread in more than 48 countries. More than 30 % of the company's products are complex machines which require continuous development and search for new, innovative technical solutions. Today, MicroStep is able to offer the full range of contemporary used cutting technologies along with a great variety of additional equipment and software for drilling, tapping, inkjet or micropercussion marking, process synchronization (scanners, CCD cameras, marking of synchronization lines) and material handling as well as enhanced production management. As a producer of not only machine mechanics but also control systems and CAM software the company delivers solutions that perfectly fit actual customers' demands and are future-proof with respect to machine extensions in size and additional technologies.

Moreover, MicroStep machines can process several types of material including plain sheets, pipes, profiles, domes and elbows while implementing advanced processes such as automatic

welding seam preparation. All of MicroStep's machines are operated by iMSNC®, a multi-tasking PC-based control system developed and produced in-house.

Over a period of time, MicroStep has established good relationships with suppliers of machine components with focus on the industry's leading manufacturers: Hypertherm, Kjellberg, Thermal Dynamics, IPG, KMT, PRC, ROFIN, Harris, GCE in the field of cutting technology; Bosch Rexroth, THK, HIWIN in the field of linear motion components; Festo, Asco Joucomatic in the field of pneumatic components; Donaldson, Kemper and Teka in the field of filtration systems.

The cutting equipment is currently going through a massive change worldwide. New systems bring new possibilities to cutting processes so there is a continuous need for integration of these technologies into CNC machines. This puts new demands on machine mechanics and controls. Thanks to the continuous effective R&D in the fields of new mechanical components, electronic modules and control systems software, MicroStep has been able to adapt quickly on the new trends. Furthermore the company keeps entering new fields of activity – robotic applications in cutting, welding and manipulation processes and development of CAPP applications for production management.

The Trade Union of the Slovak Food Industry (Odborový zväz potravinárov Slovenskej republiky) represents employees working in the food industry in Slovakia. Its main activity is the negotiation of higher level collective agreements and collective agreements at company level.

The Trade Union of the Slovak Food Industry provides its members with advice on employment, legal, salary and retirement issues free of charge and monitors food manufacturers' compliance with safety regulations. It further provides education, schooling and expert consulting to its members. You will find more information on the wide range of activities of the Trade Union of the Slovak Food Industry at www.ozpotravinarovsr.sk

Each member of the Trade Union of the Slovak Food Industry may make use of the attractive conditions offered at Penzión *** Oravská horáreň holiday resort in Oravský Podzámok all year round. The resort is open for the general public and so, dear reader, you are also cordially invited to spend a relaxing, affordable holiday at Penzión *** Oravská horáreň.

"A place where willingness and a smile are natural"

Find out more about the wide selection of services offered at Oravská horáreň at www.oravskahoraren.sk

- 4 * star hotel in quiet surroundings in the near distance of the river Danube (2km) and the town Komárno (15km)

Práca a vzťahy (Labour and Relations) Civic Association

www.pracaavztahy.sk

Interview with JUDr. Mária Ritomská,
founder of the Labour and Relations Civic Association

1. Can you tell us about the origin, aims, visions and activities of your non-governmental organization?

Many institutions whose titles refer to the protection of human rights, such as Slovenské národné stredisko pre ľudské práva (Slovak National Centre for Human Rights) or Verejný ochranca práv (Public Defender of Rights), were formed in Slovakia after 1989. But we learned that they are not authorized to address mobbing and the behaviour of those who conduct psychological terror at workplaces. Aggressiveness is on the rise in society where belligerent people dominate, where the struggle for employment and survival goes on, where human values have been reduced to money and human life to performance.

Therefore, we were looking for help and we found it in the Práca a vzťahy (Labour and Relations) Civic Association, which was founded in Slovakia on 24 October 2003, and registered at the Ministry of Interior of the Slovak Republic. On 17 November 2011, the anniversary of the Velvet Revolution, we officially renewed the activities of this civic association whose main activity is to monitor workplaces in which the mobbing and bullying of employees and dangerous corporate culture are suspected.

We document cases related to disfunctional interpersonal relations at the workplace which is manifested in the form of bullying, mobbing, bossing, and sexual harassment. We also engage in upbringing, education, counselling, further education in the area of interpersonal relations at the workplaces by pointing out the consequences of such behaviour, providing psychological and legal assistance to victims of mobbing and bossing and disseminating information to the general public regarding the current state of human rights in corporations, organizations and enterprises; in addition to the thorough control and prevention of any violation of human rights at workplaces suspected of mobbing, bossing, the humiliation and harming of employees, psychological attacks, causing stress and depression and bullying at workplaces.

2. What is the current situation in human rights protection at workplaces in relation to employees?

Employees often lack certainty regarding the stability of their employment; they lack the feeling of security and become estranged from their employer. Permanent and long-term uncertainty and tension frequently lead to health problems.

As opposed to previous periods, nowadays the antagonistic tendencies of employee-employer relationships are growing stronger due to existential threats. After the Velvet Revolution, employees lost the conviction that had been nurtured over time that if they worked hard and identified with the interests and aims of their employer as much as possible, they would have a relative certainty of keeping their jobs.

3. How can employees protect themselves from psychological terror at the workplace?

We recommend keeping a detailed list of cases of mobbing, i.e., a mobbing diary, so that actual facts and not only emotional general complaints can be used in the event of legal action.

Since this pertains to the facts of the case when communication definitely fails, the aggrieved party should insist on meeting and request explanations. If this proposal is rejected, one must stand firm and insist on a meeting via registered letter which will later serve as evidence. Psychological terror at workplaces does not necessarily lead to direct damage to the victim of intimidation, but it could force him/her to leave at his/her own request.

4. Where from did you first draw inspiration for your activities?

Our civic association got to work right after its founding, which as I mentioned, took place on 17 November 2011, by our active participation in a conference in Prague on 12 December 2011, which was organized on the occasion of the work of professor Heinz Leymann – a unique champion in the field of antimobbing. This German sociologist and pioneer of mobbing, noticed a certain type of behaviour in the working environment and based on intensive research he created the definition of mobbing (1984). Mobbing describes a situation in which one or more persons attack someone at least once a week for at least for half a year. This causes the intentional degradation of human dignity and harm to the victim due to constant psychological pressure. At the aforementioned conference we developed intensive contacts with Dr. Pavel Beňo, a mobbing expert in the Czech Republic. And through websites we distributed information regarding our activities, education and the monitoring of individual cases.

5. What do you think is the cause of this behaviour at workplaces?

Permanent, systematic and intensive attacks, intrigue and the bullying of an individual or a smaller group by a larger number of workers or superiors is a form of workplace terror. The main cause is a serious defect in communication or relations among a team of colleagues; it is a form of undesirable aggressiveness in interpersonal relations. However, the mobber/bully, in this case a superior, does not realize that he/she is causing huge psychological suffering which can lead to psychological problems with permanent consequences.

6. You also provide legal representation?

Yes, our goal is also to help victims of mobbing by providing legal advice. As the chairwoman of the Práca a vzťahy civic association, I initiate legal action and carry out legal representation. Nowadays, some of my cases are being heard before courts in Bratislava, Nitra, Prešov, Nové Mesto nad Váhom, and Košice.

7. Can success be achieved by out-of-court settlements?

It depends on the will of the participating parties. We ask the direct supervisors to provide their opinion and to contact us personally so that we can inform them about our help when communication fails. Unfortunately, supervisors are often not very welcoming and this is when they send their lawyer. At this point we must prove mobbing in the presence of their lawyer. Usually, they inform us that the course of action taken by the employer was in compliance with the Labour Code. But they do not pay any attention to the facts of the case, why the supervisor consistently acted inhumanely towards the victim of the mobbing, why he/she humiliated the victim, and sabotaged and abused the victim's work.

8. Does any legislation apply to such behavior?

Not yet, but citizens want it; that's why they sent me to parliament. But the position of parliament in passing laws has been set in the course of 24 years in such a way that subjects with power know how to push through laws.

9. The media reported that you left the Obyčajní ľudia a nezávislé osobnosti /OĽaNO/party. Why?

Even OĽaNO did not want to accept my programme concerning the protection of human dignity at workplaces which I brought to parliament. On the contrary, they started to create laws just as we had as of today. Every deputy must contribute to a joint team of lawyers which prepares laws.

I refused that from the very beginning; as a result I was blocked from having any input regarding the preparation of legislation. My opinion is that laws must be created from the bottom, because nowadays the situation is only enslaving citizens.

10. How do you see your further activities in parliament?

With help of the party I will organize citizens to prevent mobbers/bullies from humiliating them at their workplaces. I will also continue in research connected with the preparation of the Act on employee protection or the Anti-mobbing Act.

11. You organized the first international conference entitled Ľudskoprávny rozmer ochrany práv zamestnancov (Human Rights Aspect of the Protection of Employees' Rights) in parliament. Can you give us some details?

Yes, on 13 November 2013 we organized the first international conference entitled Ľudskoprávny rozmer ochrany práv zamestnancov (The Human Rights Aspect of the Protection of Employee Rights). We invited the Prime Minister, relevant ministers, the National Labour Inspectorate, regional labour inspectorates, the office of labour, psychiatrists, psychologists. Citizens with experience with mobbing, which amounts to 80%, showed great interest. In the current situation marked by bad interpersonal relations, many of them were afraid to speak openly or have their photos included in the conference's collection of papers. Our citizens could see the lack of interest of our government and the parliament deputies in addressing such an important issue of contemporary society as the humiliation of human dignity and which constitutes the subject of the upcoming agenda of our civil association Práca a vzťahy in the form of international cooperation with other European Union member states.

Thank you for the interview.

National Centre for Research and Application of Renewable Energy Sources Clean Energy and Materials

Goals of the centre

In recent years, the topic of renewable energy sources has attracted as much attention as the Internet and information and communication technologies in the 1990s. It has become the hottest and most discussed subject among global leaders, investors and in the media. Since the Industrial Revolution there has not been a comparable process of transition when it comes to renewables.

National Centre for Research and Application of Renewable Energy Sources was established by the Slovak University of Technology in Bratislava and in co-operation with other Centres of Excellence focused on basic and applied research, and knowledge transfer.

The aim of the Centre is to increase the research and innovation potential of STU, and the integration of research teams concentrated on new, ecologically acceptable renewable energy sources.

The main areas of research are:

- energy and materials from biomass,
- solar heat and electricity,
- water energy.

Activities of the centre contribute to the competition

ability and success of STU in international research cooperation. Top research conducted within this project also enables for the latest knowledge to be transferred into academic programmes to educate the young generation of specialists.

Guarantee and financing

Slovak University of Technology in Bratislava acquired financial support from the European Fund for Regional Development for the establishment of the National Centre for Research and Application of Renewable Energy Sources in the framework of the "Operation Program Research and Development".

The National Centre for Research and Application of Renewable Energy Sources is professionally guaranteed by four Faculties of STU:

- Faculty of Chemical and Food Technology,
- Faculty of Electrical Engineering and Information Technology,
- Faculty of Mechanical Engineering,
- Faculty of Civil Engineering.

Slovak University of Technology in Bratislava is a research oriented university contributing to the development and spread of scientific knowledge.

Energy and materials from biomass

Plant biomass is conserved solar energy bound by plant photosynthesis in organic matter. Plant raw materials can be utilized not only for energetic purposes (biofuel, biogas and ethanol production), but also for the production of valuable chemical compounds obtained presently mainly from crude oil. Biomass processing involves the following processes:

Process	Typical methods
Mechanical	pressing, graining, mixing
Physical	distillation, extraction
Chemical	hydrolysis, pyrolysis, combustion
Biochemical	fermentation

Activities of the Centre are based on 67 years of scientific and pedagogical experiences of STU staff in the Biomass area. The best methods of complex treatment of different kinds of lignocellulosics (wood, annual plants, wastes, etc.) get applied to gain the energy and materials (Biorafinérie and Biofuels).

The Centre uses mechanical, physico-chemical and biochemical processes in treating the renewable raw material.

Bio oil Wooden pellets (obr.1)

Solar heat and electricity

Sun is the biggest energy source in the Solar system. Solar energy captured by Earth in a minute would suffice for the whole mankind for a whole year. In numbers it represents the power output of 10 000 kW per person.

In the field of solar energy utilization, the Centre concentrates on the research of new semiconducting materials which allow effective use of available solar cells. The Centre also investigates possibilities of solar power plant integration into the electricity supply system.

The inconsistency of solar radiation intensity in Slovakia requires an inclusion of energy accumulation equipment in larger systems.

The Sun radiates power of cca 6x10¹³ kW to Earth Photovoltaic power plant in Bušanovice has 5320 panels and the power output of 1361 kW (obr.2)

Water energy

Primary hydroenergetic potential is in the renewability of energy sources which belong to natural assets of every country. The technically exploitable part of the hydroenergetic potential is possible to be enlarged in two ways:

Considering existing water constructions with energy exploitation, it is mainly the optimization of the operating routine, when better manipulation with water is examined.

Another possibility is the design and use of new waterworks which have not been exploited so far. The choice of locations, especially on the river Hron and other smaller water courses has to respect not only the legislation, but also the protection of environment of the river catchment area.

The National Centre is engaged in the research aimed at increasing the potential of utilization of the primary hydro energy whilst safeguarding the water traffic safety.

Projekt je spolufinancovaný zo zdrojov EÚ

Centrum of excellence for Materials Diagnostic – APRODIMET

CE APRODIMET at the Slovak University of Technology (STU) in Bratislava, Faculty of Materials Science and Technology (MTF) in Trnava represents monothematic scientific centrum based on application of the most advanced experimental procedures characterizing of specific properties of materials in the light of study programme Materials and Physical Metallurgy. Activities of CE are also aimed in order to make it more attractive for high-school students in study of technical and materials-oriented study programs, making available modern instrumentation, set up centers for all candidates from the professional community, organization of seminars and summer schools, and propagation of materials science and its successful representatives in medial way.

CE has highly qualified workers in the evaluation of metallic and non-metallic materials properties, from which a bigger part has completed international fellowships at the top scientific research institutions, where they were familiar with modern experimental techniques, computational methods and simulation software which are often used in the real industrial conditions. Here are included into quality control particularly in electrical, automobile, aerial and energetic industry. Theirs professional qualities are presented by scientific results in reputable journal magazines, which are generally oriented into Materials Science and Physical Metallurgy.

In recent years, subjects of materials research at MTF are functional bio-compatible materials, multifunctional composite targets for PVD technologies, light metal alloys reinforced by nanocrystalline blocker of plastic deformation, lead-free solders, tools steel with higher wear resistance, functional wear resistant coatings onto tools and construction materials, stainless steel materials, high temperature superconducting materials, eutectic composites with high ion conduction, materials with disordered structure, and cluster structures in complex metallic alloys as well.

Realization of project OPVaV - 2008/2.1/01-SORO „Centrum for development and application of progressive diagnostic methods in processes of treatment of metallic and non-metallic materials“ and subsequently OPVaV - 2008/2.1/01-SORO „CE for development and application of diagnostic methods in processing of metallic and non-metallic materials“ significantly increased quality of experimental and instrumental background, supported the development of human potential and cooperation abilities of the faculty. Problems of insufficient experimental equipment were significantly eliminated what subsequently led to increasing of quality of pedagogic processes. Students of

master degree and PhD. candidates have great possibilities to familiar with devices and equipments which their future employers in producing or research sectors in generally are equipped.

Due to development in nanotechnology, study of amorphous materials, cluster structures and further progressive systems, the view on the solids has become more uniformed. For example, due to nanocrystalline materials, interfaces (grain boundaries) have become seen as well as volume significant part of microstructure. Difference diminished in interpretation of surface and volume effects. Searching for new concepts, which would make it possible to reliably interpret the cluster structures with giant elementary cells (order thousands of atoms), are investigated due to them. Also knowledge of degradation processes at interfaces, interactions between biological and inorganically-metallic systems are highly important for prediction their properties and in the development of new materials.

Preferred methods based on prediction of properties in condition of extreme load particularly with simulating software using the finite elements methods, which mostly require the knowledge of precise thermo-dynamical properties of materials. These are not easily to evaluate without approach based on simultaneous thermal analysis with combination of spectral analyzers, which are able to gain information about surface and volume properties of materials.

To ensure of coverage of such extensive diagnostic system is CE APRODIMET divided into 5 laboratories.

Laboratories of heat flows is scientific research laboratory for investigating of materials in terms of their thermal stability, lifetime in thermal exposure, safety of materials in high temperature load-

ing in controlled atmosphere of oxygen, research in safety parameters of nanomaterials, composites, polymers, surface coating, etc. Research in this laboratory is focused on initialization stage of degradation of materials, surface modification and polymers in terms of formation of decomposition products, corrosive gases, and carbon oxides.

Fig. 1 Conical calorimeter for heat flux from 0 to 100kW.m⁻²

On the basis of consumption of oxygen in high temperature loading of materials, the rate of weight loss, rate and amount of heat released are investigated. For studying of polymer materials and organic sur-

Fig. 2 Infrared camera FLUKE Ti55 for temperatures ranging from 20 to 600°C

Fig. 3 Safety calorimeter

face modification, critical heat flux for ignition of materials and activation energy, and effective temperatures of combustion in controlled oxidizing atmosphere at various heat fluxes are investigated as well.

In the monitoring of long term resistance of materials, the mechanism of decomposition of long-term loaded materials, reaction enthalpy in long-term high temperature loading materials, activation energy of combustion are studied. In the monitoring of safety of materials treatment, there are simulated some processes of technology at evaluated temperatures, Runaway-reactions, the temperature of ignition and self-ignition are determined.

Materials research is carried out in order to determine the explosiveness, explosive forming of metals, handling with explosive and flammable wastes, flammability and explosiveness of metal powders, stability and reactivity of nanoparticles.

Fig. 5 Simultaneous thermoanalyzer with weight spectrometer for temperatures ranging from 20 to 2000°C

Laboratory is equipped with modern, internationally accepted devices which allow a simulation of technological processes during production, using and disposal materials, and also thermal loading at high heat flux (up to 100kW.m⁻²), weight loss in controlled oxidizing atmosphere during long-term thermal loading, formation of corrosive products. These devices are unique, which are not available in Slovak Republic, and they contribute to the development of science background of safety materials and technology research. They are safety calorimeter, conical calorimeter, infrared camera and the chamber for detonation.

Laboratory for thermo-physical measurement and calculation is inseparable part of scientific procedure of design, analysis and optimalization of technological process of production and treatment of progressive materials. There are also techniques of physical and computer modeling and numerical simulation of materials behavior implemented with experimental thermo-physical properties. In contrast to real experiments, computer simulation allows to study the phenomenon in more detail and to monitor significantly higher amount of physical values in correlation between them. On the basis

Fig. 6 High temperature dilatometer, working temperature ranges from -160 to 2000°C

Fig. 4 Chamber for detonation

of qualitative and quantitative evaluation of result, it is possible to predict the behavior of materials in various loading and boundary conditions, which simulate the production process, to define determining conditions influencing process of investigation and to identify the causes of undesirable effects.

In consideration of present complex models and numerical analysis, computer simulation significantly contributes to explanation of physical-metallurgical and technological causes which influencing each other. It is necessary to point it out that reality and precision of numerical analysis depend on the accuracy of input data (experimentally gathered materials properties, relevant data from materials database, boundary condition, loading, etc.), but it also depends on chosen mathematical models and computing. There is a need to verify applied computer procedures and results from computer simula-

Fig. 7 Laser flash analyzer for determination of thermal diffusivity, temperature ranges from 20 to 2000°C

tion with using experimental measurements, which subsequently leads to the development of diagnostic and experimental methods.

The top commercial program systems allow the solution of complex associated tasks and analysis of electromagnetic, thermal, stress-deformation, diffusion and fluid areas with implementation of phase transformation in various technological processes of production and materials treatment. Simultaneously they represent open systems, where is possible to implement own computational procedures, materials models and specific elements.

Instrumentation and software gain the complex knowledge about properties and structures of wide-area of materials, and also prediction of materials behavior in processes of production and treatment. Gathered results are sufficiently exact and contribute to the development of knowledge. They are used in production as well.

Laboratory of corrosive tests is equipped with high standard laboratory technique for evaluation of level of corrosive processes of metals and their degradations. Laboratory is focused particularly on science and research in order to protection of metal materials against corrosion and surface modification of metals. Instrumental allows designing a solution for improving a state of technical equipment, renovation processes, and projects of anticorrosive protection either of components or whole constructions. Modern unique devices allow measurements of electrochemical characteristics, which are used for immediate determination of corrosion of metals, tendency to atmospheric, pitting or intergranular corrosion and passivation ability in various working environments and many other corrosive properties of material and the working environment in terms of corrosion.

Fig. 9 Mist chamber for testing of corrosion resistance

Corrosion resistance of stainless steels is all due to the presence of small (1 - 5nm), almost invisible passive oxide film on the steel surface, it being understood that this layer can fulfill its function only if it is intact. Immersing the steel in a solution which dissolves the oxide film, stainless steel will become susceptible to corrosion. The most important is the overall composition of the environment, including its pH and concentrations of the components, temperature, corrosive, impurities in corrosive media, as well as pollution of surface material, surface finish and material velocity corrosive. These parameters can be determined by using potentiostatic tests.

Mist chamber allows the realization of long-term tests of metal corrosion and degradation of protective coatings in various simulated corrosion conditions. Can take place at the same time accelerated corrosion tests at temperatures from 2°C to 50°C in pure or contaminated moist atmosphere. Pollution is possible to simulate industrial atmosphere (industrial

Fig. 10 Equipment for corrosion test under voltage CORTEST

areas, road tunnels), marine atmosphere, industrial marine atmosphere, etc.

For all the alloys, there is a chemical environment which, in combination with the voltage leads to cracking. It is a specific case of rupture in the form of cracks that may have transgranular, intergranular or mixed nature. The emergence and spread of cracks in corrosion cracking is conditioned by three factors: the material factor, environment and temperature. Simulating operating conditions using test equipment SCC (Stress Corrosion Cracking) and the application of corrosion tests under tension, these factors and prevent stress corrosion cracking during use of the material can be analyzed.

Laboratory of structural analysis, which is equipped with the most modern microscopes (electron, light and laser), was extended to superior X-ray diffractometer, which is generally aimed preferentially on research of influence of external parameters and technological procedures for qualitative and quantitative characteristic of structural components with emphasis on the evaluation of internal and external deformations of the crystal lattice and thus the effect of redistribution of atoms, as well as due to thermal, thermal deformation or corrosion, tribological and physico-chemical effects of the environment.

It is mainly determining the level of residual stresses in the depth profile of heat treated parts, structural refinement of new and modified phases, taking into account currently handled projects DMAT, determine the size of coherent scatter-

Fig. 8 Equipment for measurements of potentiostatic tests PGU 10V

ing regions, texture analysis of deformed cast and systems. This will include high-temperature chamber for in situ analysis of material complexes. The diffractometer is equipped with excellent detection systems that increase the sensitivity, readability and speed measurement. X-ray diffractometer includes a database of diffraction and crystallographic data.

Despite the fact that X-ray applications diffraction in materials engineering are developed practically since the discovery of radiation in 1895 W.C. Röntgen and X-ray methods can be considered relatively

Fig. 11 Multifunctional X-ray diffractometer Pananalytical EMPYREAN for analysis in temperature ranges from 20 to 1100°C

very old, the development of computer technology, new physical discoveries and modern technical base create superior conditions to increase the speed of analysis, accuracy and reliability of measurement. Fully automated all important features allow optimizing the measurement conditions, combined methods, apply special detection systems and thus achieve extremely qualitative and quantitative results.

Laboratory of coating and heat treatment is designed to be able to develop appropriate experimental materials having a specific structure of the surface layers and also a defined structure in the core. These are primarily designed PVD coatings, as well as classical methods of cementation, nitrocarbonizing, nitriding and carbonitriding.

Technology of physical vapor deposition famous for the term PVD (Physical Vapor Deposition) is used for the production of surface layers using physical processes. By physical methods, sputtering and evaporation and condensation of a solid mixture of the target atoms and ions on the surface of the material are used. The process temperature is in the range from 200 to 500°C, vacuum from 10⁻³ to 10⁻⁴ Pa. Thickness of the coated layers of the PVD methods at low normally is between 2 and 5 µm. Hardness layer, depending on the coating material, is about 2500 HV. Proper form layer increases tool life up to twice and it is possible to increase cutting speed by 20 - 50%. In addition to the above, the formation of layers generally increases resistance to adhesive and abrasive wear, scuffing, when machining prevents up edge, reduces the cutting force and heat developed.

In the laboratory, there are installed two multifunctional devices. For classical methods of chemical and chemical-heat treatment is a multifunctional laboratory furnace LAC allowing thermochemical treatments for suitable substrate and subsequent thermal processing with controlled atmospheres. The second device Platit p80 + DLC is a plasma generating PVD technology using revolutionary LARC® (Lateral Rotary Cathodes) for preparing nitride-based layers of titanium, aluminum, chromium and silicon. It also allows preparation an amorphous DLC (Diamond Like Coating) coatings.

Due to the structure of the industry in the Trnava region (PSA, Samsung, Nuclear power plant Bohunice and many others) provides the existence of such modern center of diagnostic material impact in terms of synergistic links between research orientation of the faculty, including doctoral studies, and practical requirements. Increase the quality of the preparation of highly qualified specialists in the field of physical metallurgy and materials engineering as well as in securing research projects.

Build analytical center of the MTF STU allowed apply for another major project supported by EU funds. There are currently

underway works for laboratories Nano-centra with a plasma ion implanter, which after completion in 2015 will produce specially coated materials. Their analysis is already prepared CE APRODIMET.

Podporujeme výskumné aktivity na Slovensku/
Projekt je spolufinancovaný zo zdrojov EÚ

Not just here but across Europe are increasingly talking about the need of consolidation of market positions of the Farmers and Food Producers. It would be good if Slovakia was able to take advantage of this boom. True, last year we have done in this direction step forward, but backwards. Repeal of the law on unfair terms of trade relations between customers and suppliers of goods, which are food, not come in due course.

The market remains dominated by chain stores, which is implemented by 70 to 80 percent of food products. The absence of rule of law to prevent abuse of dominant position, and is felt most of it ultimately is paying the weakest link of the food chain. It turns out that primary producers should be more themselves into marketing organizations and use their synergies and to ensure input. Unfortunately, in this respect we are still in its infancy and will not move significantly out of place.

Still remains a current need for greater penetration of farmers in the processing sector and finding new outlets, including the distribution of fresh food. If the space filled by peasants, someone else will and then he gets the largest share of profits. Obviously it would not matter since, if we remember in this context also in creating new Rural Development Programme and the rules under which the next programming period, the EU will provide support from it.

A big disappointment for us European Commission proposals to reform the Common Agricultural Policy after 2013, whose approval would mean the continuation of unequal access to new member countries, including Slovakia. Therefore, we must do everything - from our self-governing organization, to ministries, government and Slovak MEPs - that we are being adopted for Slovakia defective points of the reform and achieved their correction.

In this direction we have taken many steps and also achieved some promising results. But critical moments still to come and we

expect that this year will go really all about. Very important is the cooperation of executive legislative power with agrarian and Food nongovernment Authority, which has so far not a dimension, such as in the neighboring Czech Republic. Before you decide on something, we have the impact analysis, because otherwise we will proceed only intuitive and therefore with a risk of committing larger errors. And you simply can not afford.

The public still perceives the Slovak agri-food complex rather negative - especially as the recipient of large grants. This change is necessary because of the many related development impulses, including consumer patriotism, which the people of Slovakia are missing. The importance of buying local food is not enough just to talk in theory, but it should also support targeted, and especially long-term sustainable campaign. At its already intense preparation work and we believe that it manages to put into practice later this calendar year. We realize that to be truly successful, we need it to get the widest possible support. We started negotiations with several business networks, which will continue. We discuss our internal structures, but also outside them, because the game is too much to have. The commitment we expect from the state underestimated the fact that in the pre-and now we are paying for it all. Such a low percentage of local food sold on the domestic market, none of the neighboring new member states that entered the EU at the same time as us.

Time will tell whether these negative trends can change, or they will be under pressure to release more space for the import of foreign agricultural and food products. Trade itself admits that there was a potential that could contribute to increasing the representation of domestic agri-food goods in its supply. This will be one of the key challenges for our chamber, which we intend to devote this year. All efforts would be useless, if not located sufficient domestic production to market. Along with promoting the effective reform of the CAP after 2013 in terms of its balance and fairness that we consider to be one of our top priorities.

Ing. Milan SEMANČÍK
President of the Slovak Agricultural and Food
Chamber

Slovak Agricultural and Food Chamber (SPPK) represents non-governmental, autonomous and statutory undertaker which was established in line with the Law No.30/1992 Coll. as amended. The basic role of the Chamber is to push forward the justified common interests of its members, mainly in the process of the agricultural and social policy setting. Chamber also takes part in the creation of the state policy concerning the support and protection of its member entrepreneurs to ensure the further development of agricultural production and food processing in the Slovak Republic.

Membership

The members of SPPK are natural and legal persons providing the business activities in agriculture, food industry and in biological, technical and commercial services for agriculture and food processing industry, as well as the other non-governmental organisations operating in the agri-business. The membership in the Chamber is voluntary since January 2005, according to the changes made to the Law. By September 30st 2005t, SPPK registers 2 108 member organisations, of which 1 803 members come from the agricultural primary production, 155 members come from the food processing industry, 111 of the members are providers of the services for agriculture and there are also 39 other organisations, mostly coming from the field of science, research, schools etc.

Internal organization

Central office in Bratislava with 15 employees and the net of 41 regional agricultural and food chambers (RPPK) operating in Slovakia. The "regional" chamber can be established also on the other than just territorial basis. This change in the wording as well as the principle of the voluntary membership was set out in the Law No.546/2004 Coll. which amended the original Law No.30/1992 Coll. on the Slovak Agricultural and Food Chamber. There are also four subjects with the statute of RPPK in accordance to the Statute of SPPK and the Law above. The activities of the Chamber are supervised by the official bodies – the General Assembly, the General Management, the President and the Supervisory board. General Assembly composed of the delegates voted by representatives of the member subjects. The General Assembly approves the Statute of the Chamber, its Electoral system, the Rule of procedure and also votes on the President, Vice-presidents, the members of the General Management and the Supervisory board. The General Management is the executive body which administrates the proceeding of the Chamber. The President is

on the head of the Chamber and the General Management, he monitors the functioning of the Chamber central office and fulfils his duties set in Status, orders of the General Assembly or the Management. The Supervisory board represents the highest body controlling all the activities of the Chamber.

Internal Communication

The Chamber is using the wide-spread net of its regional chambers in the whole territory of Slovakia. The central office communicates with the regional chambers using the internet and emails, but also regular meetings to discuss the actual issues. The Slovak Agricultural and Food Chamber is the only autonomous organisation in the Slovak Republic combining the entrepreneurs operating in agricultural primary production, food processing industry and services for agriculture. SPPK is communicating also to its member associations as well as to the other agricultural autonomous organisations. All the members of SPPK have direct access to the office in which they are registered, but also to the central office in Bratislava.

Activities

The Chamber's activities are concerned on:

- Legislative – legal sector
- Providing of business information service
- Guidance and education
- Co – operation with the international organizations

Membership in international organizations

1. International European farmers organization COPA/COGECA
2. Confederation of the food and drink industries CIAA

Co-operation with national and international partners

The Chamber is co-operating and communicating also with the state bodies accordingly to the conditions set out in the Law and in the Agreement on a Co-operation between the Council of the Agricultural Statutory Undertakers and the Ministry of Agriculture of the Slovak Republic to search for the solutions of the problems in agriculture and food sector. SPPK pays extra attention to development of the international contacts and took the initiative of the periodical meetings of the representatives of the agricultural chambers from the "Visegrad four" countries (Slovakia, Czech Republic, Hungary and Poland). The Chamber is communicating also to other agricultural chambers within the European Union.

Member associations of food processing

SPPK organizes 12 associations of the food processing industry – see below:

Dear Sirs,

Slovak Chamber of Commerce and Industry as a member of International Chamber of Commerce in Paris and member of Eurochambers in Brusel is a statutory acted in whole Slovakia, which represents and coordinates common interests of members in domestic and foreign business activities.

Slovak Chamber of Commerce and Industry was constituted by Law No. 9/1992 in 1992, raised on rich experiences from activities of Chambers of Commerce and Industry in the territory Slovakia, which history stretch back to the half of 19.century. In the year 2010 we celebrated the 160th anniversary of chambers creation in Slovakia. Dimension of these chambers far and away exceeded the economy border what helped to keep national identity and economic, cultural and social life development in Slovakia.

Slovak Chamber of Commerce and Industry for whole bygone period was the important institution in the process of changes. Institution, which by respecting rules of game is recognized by others and using this position to assert interests of Slovak economy in abroad and to create position of business branch in domestic social environment.

The basic relation and structures for direct participation of Slovak business structures to global and European markets has been created by Chamber in the past. The creation of Slovak Committee for Business and Industry (BIAC) by OECD, Economic and Social Council (ECOSOC) as consultative body of European Commission and National Council of International Chamber of Commerce in Slovakia represent principal steps to worthful participation of slovak economic subjects on decision making process in international economy.

The Chamber as a business institution wants to support changes in regional and occupational structures for economic development of Slovak Republic, for development and business protection, development and international trade alleviation and increase competitiveness of Slovak business subjects. The Chamber will support development of private entrepreneurship, will contribute to the long term strategy of development of economy of Slovak republic. Chamber will continue in supporting mainly SME's to penetrate more actively to the unified market of EU 27 as well as to the market of third countries.

The Chamber on behalf of service approach to own members and also non members and foreign partners has constituted 8 regional chambers in residence of all regions and further 4 offices in important business centres of Slovakia. Apart of this there are 17 special departments with whole Slovakia activity, which are created based on principle relation of line of business.

Our today's role is to contribute to the economic and social transformation and to her reform to society of prosperity and perspective. Chamber has created 5 consultative bodies, representing namely economic, foreign trade, industrial, regional and education.

We are sensible to the fact, that in the period of continuing world economy internationalization and global process the international trade and international business are one of the most important attributes for assurance of steady and sustainable development.

I am sure that also this publication can partially contribute to improvement of the trade and economic relations and contacts of Slovak business subjects with foreign partners.

BRIDGE TO THE WORLD OF BUSINESS

Dear Partners,

Your decision to do business in Slovakia is a wise one. The Slovak Republic is well known for its high level of culture, qualified workforce, advantageous geographical position in the centre of Europe on the border between the West and the East, favourable taxation system, and extensive transport communication network. To do business in Slovakia means to hold a stake in the expansion of a region which, in the future, will have increasing significance for European trade and prosperity. Your investments and personal effort will therefore soon be rewarded with a fast return and high profit. During the course of your business activities, you will often need help and advice from someone who is familiar with this environment and who has been active in it from the very beginning. That is why the Slovak Chamber of Commerce and Industry (SCCI) wants to be your first point of contact and your partner when entering Slovakia. The SCCI is an independent public and legal institution which, in a similar way to the Chamber of Commerce in your home country, provides a full range of services to its members and other domestic business groups, as well as interested parties from abroad.

We will provide you with valuable contacts!

Some things that the SCCI will arrange for you:

- ✓ contacts with domestic businesses
- ✓ contacts with professionally-oriented sections
- ✓ finding suppliers
- ✓ finding manufacturers
- ✓ finding importers
- ✓ finding companies suitable for joint ventures and acquisitions
- ✓ the corporate profiles of companies and institutions
- ✓ in the event of your visit, recommendations and the organisation of meetings, including secretarial services, accommodation, transport, etc.
- ✓ advertising in the SCCI newsletter, which is distributed to all SCCI members, as well as foreign consular offices in the Slovak Republic, consular offices of the Slovak Republic abroad, representative offices of foreign companies in Slovakia, government institutions, and Slovak businesses.

We will prepare the ground for you!

For your trade mission in the Slovak Republic, the SCCI will arrange:

- ✓ meetings with Slovak businesses
- ✓ a comprehensive programme for mission participants (accommodation, transport, cultural programmes, and other services on request)
- ✓ background information required for negotiations

We will meet all your needs!

For seminars, lectures, or training the SCCI offers:

- ✓ the attendance of Slovak participants
- ✓ a venue, including the necessary equipment (audio-video), translations, and refreshments
- ✓ advertising, invitations, and media publicity
- ✓ accommodation, transport, and transfers

We will introduce you to a specific environment!

In addition, upon request, the SCCI can arrange:

- ✓ marketing studies
- ✓ statistical overviews
- ✓ consultations on legal, financial, taxation, and customs matters
- ✓ information on business conditions and opportunities
- ✓ translations of acts, rules, and regulations
- ✓ information on import regulations (limits, quotas, restrictions, and certifications)
- ✓ participation at exhibitions and trade fairs
- ✓ information about options and conditions for investing, capital investment, and private ownership in the Slovak Republic
- ✓ interpreting and translation services
- ✓ other services upon request

Arbitration Court

The Arbitration Court of the SCCI is an independent body that also offers its services to you. It resolves property claims between entrepreneurs arising from business and economic relations. It realises consultation and advisory activities to settle such claims.

Information on investment conditions in the Slovak Republic is available in all offices of the SCCI.

The Region of Banská Bystrica

Number of inhabitants:	658 490
Area:	
- Total:	9 455 km ²
- Forests and woodland (%)	49%
- Agricultural land (%)	44%
Protected area (%)	34.82%
Population density (people per km ²)	69.6
Urban population:	54.1%
Number of municipalities:	516

The Banská Bystrica Region lies in the southern part of middle Slovakia. The region shares the border with Republic of Hungary. It is the largest self-governing region in Slovakia. The centre of the region is the city of Banská Bystrica with approximately 81 000 inhabitants. There are 516 municipalities in its territory, out of which 24 are towns. The residential structure is represented by all settlement formations from medium-sized towns through small towns, rural municipalities to scattered provincial settlements.

The Banská Bystrica Region territory belongs to the top regions from the perspective of the country and nature surroundings, in some cases even in the international scale. There are four national parks located in the Banská Bystrica region, either fully or partially. These are the Low Tatras, the Veľká Fatra, Muranská Planina and the Slovenský Raj, protected landscape areas of Cerova Vrchovina, Poľana (UNESCO biospheric reservation), Ponitrie and the Stiavnica Hills, national nature preserves and a great number of protected areas, localities and objects with lower rate of protection.

The road system consists of 3.144 km of roads out of which 577 km are the roads of category I. There are two important transportation routes crossing the Banská Bystrica Region. The north-south transit route marked within the European road system as E 77 /Varšava-Krakow-Banská Bystrica-Zvolen-Šahy-Budapešť/ and west-east marked as E 571 /Bratislava-Košice/. In 2011 the R1 highway had been completed which connects Banská Bystrica Region with Bratislava by four-lane road.

Two railway lines crossing the region territory connect the south of Slovakia with north and west with east on the routes: Bratislava – Zvolen – Košice - Čierna nad Tisou - Ukraine and Žilina – Zvolen – Lučenec - Republic of Hungary, which are interlinked with a dense network of railways of regional importance.

Air transport is available via the Sliač Airport located between towns of Banská Bystrica and Zvolen, and this belongs to the network of international airports. Two smaller airports Očová and Boľkovce are used predominantly for purposes of recreational flying.

The most important development area in the BBSK (the Banská Bystrica Self-governing Region) is the territory of Banská Bystrica and Zvolen districts, due to the fact that universities and research institutes have a seat here as well as owing to the proportion of economically active population with university and secondary education.

Besides university education, the education in BBSK is ensured via a network of primary and secondary schools and via educational institutions, which provide courses for further education, accredited by the Ministry of Education of the Slovak Republic. There are altogether 96 secondary schools in the region, out of which 63 were administered by the regional government, 20 are administered by state, 8 of them are private schools and 5 are church schools.

The university education in the BBSK is provided by three universities: Matej Bel University in Banská Bystrica, Technical University in Zvolen and Academy of Arts in Banská Bystrica. These universities symbolize natural characteristics of the region (cultural variety, woods) on one hand and traditions in the development of art and education on the other hand. They present a great potential on which the region can build its future not only in the context of Slovakia but also in the European context.

Concerning the educational level of the economically active population measured by the number of university educated inhabitants, the Banská Bystrica and Zvolen districts reached the second and third position after Bratislava - city. The mentioned districts have a comparative advantage mainly in the field of sophisticated activities, such as industry research and development services, supporting innovation centres, information technologies, biotechnologies, call centres etc.

The Banská Bystrica region is an attractive tourist area owing to its historical sights, natural beauties, cultural and sports events and the tradition in organisation of exhibitions. Nearly half of the region area is covered by forests, which create ideal conditions for the development of tourism, agrotourism, winter sports, water sports and game hunting.

The leading industry sector in the region is metallurgy (from the viewpoint of revenues and employment) which represents over 60% of the total industry export of the region. Further important sectors are pulp and paper industry, pharmaceutical industry, wood processing industry, engineering industry and production of construction materials. The northern part of the region has relatively high degree of industrialization. The southern part of the region is a basis of the food processing industry and other sectors complementary to the agriculture. Significant industries are also forest industry, logging and wood processing.

Foreign capital is concentrated in 1705 firms, which represent 8 % of the entire number of business entities listed in Business Register. The most successful of them are Slovalco, a.s. Žiar nad Hronom, Knauf Insulation, s.r.o. Nová Baňa, Evonik Fermas s.r.o. Slovenská Ľupča, Continental Automotive Systems Slovakia s.r.o., Zvolen, Johnson Controls Lučenec s.r.o., Witzenmann Slovakia, spol. s r.o. Vlkanová, Küster - automobilová technika spol. s r.o. Vlkanová.

The priority of development of the region is to stay attractive for foreign investors. As the main reasons to invest in the region are considered:

- Strategic location in the centre of Europe with great export potential–market of 300 million people in 1000 km radius
- Optimal transport connection with significant European centres – Vienna , Budapest, Bratislava, Prague, Krakow, Kiev
- The Banská Bystrica - Zvolen agglomeration offers suitable territorial and technical conditions for building the 3rd metropolitan centre in Slovakia
- Diversity of economic sectors
- Significant potential needed to establish the links with foreign contractors – local subcontractors from the region
- Qualified labour force
- Established manufacturing infrastructure
- Authorized Regional innovation strategy of the Banská Bystrica Region establishes favourable conditions in the region for further development of science, research and innovation
- Excellent natural and climatic conditions for the development of tourism related to winter, summer leisure activities and health resorts services - spas
- Wide range of available cultural, social and sports related activities

The Region of Bratislava

Bratislava, the capital city of the Slovak Republic, is a town with location at the confluence of the rivers Danube and Moravia, on the ridge of the Little Carpathian Mountains and at the place where Austrian, Hungarian and Slovak frontiers meet in one point. It predetermines for ages the role of Bratislava as an important trading place, crossroad of transport routes, area of political life, business, financial services, industry, agriculture, education, culture and sport. Whether called Preslau, Pressburg, Pozsony or Bratislava, the hospitality, architecture, excellent food and good wines dominate its friendly atmosphere.

Bratislava and Bratislava Region became to be the most developed Region of Slovakia from economical, social, research and technical point of view. The strongest economic position (25% of GDP) of Bratislava among Slovak regions mirrors also a strong position of Bratislava within the country.

THE BRATISLAVA REGIONAL CHAMBER OF SCCI

The Region of Košice

THE BASIC INFORMATION

The modern history of Košice Regional Chamber starts in the year 1992 when it was re-established according to the Act No. 9/1992 passed by National Council of Slovakia concerning chambers of commerce and industry. At the same time, The Slovak Chamber of Commerce and Industry was established as an independent legal subject. The present activities of the Košice Regional Chamber of Slovak Chamber of Commerce and Industry are very closely connected with the Chamber's history which goes to the year 1850. This fact proves, that Košice Regional Chamber is the oldest chamber in the territory of Slovakia and one of the oldest in Central Europe.

The Košice Regional Chamber represents member companies of the whole Košice Region and plays an important role in domestic and foreign trade with special attention to the markets of the Eastern Europe and Russia.

The Košice region is located in the eastern part of the Slovak Republic with an area that exceeds 6700 km² and has more than 765 thousand inhabitants. Nowadays, Slovak authorities have registered more than 30 thousand entrepreneurial entities with all types of business activities within the Košice Region. The most important kinds of industries allocated in the region are: metallurgy, engineering, chemistry and textile production.

PROVIDED ACTIVITIES AND SERVICES

- Co-operation with commercial and industrial chambers abroad (organising business missions, seminars, meetings on economic co-operation, publication of commercial promotions, seeking trading partners, exchange of commercial policy documents and other information),
- Consultancy on legal, financial, commercial and customs issues,
- Customs and certification services (issue of ATA Carnets, authentication of certificates of origin of goods, commercial invoices, powers of attorney, "force majeure", contracts, letters of reference),
- Librarian and information services (contact data of foreign and domestic companies and other information concerning trade conditions and doing business in selected countries).
- Educational activities (organising seminars, workshops and conferences on current issues of International trade, trade logistics and business.)
- Publication activities (specialised publications for support of business and reduction of trade risks, publication of current general standards in international trade, publications concerning technical, economic and legislative issues.)
- Facilitation in property disputes in international trade of domestic subjects at the Court of Arbitration of Slovak Chamber of Commerce and Industry in Bratislava.
- Promotion of members of Slovak Chamber of Commerce and Industry through the network of the International Chamber of Commerce in Paris and other information media in co-operation with chambers of commerce and industry abroad and branch offices of the World Trade Center.
- Mediation and publications of business opportunities, offers and other business information for foreign and domestic companies. Presentation and representation of members of the Chamber at domestic and foreign exhibitions and other events.
- Co-operation with representative offices of the Slovak Republic abroad.
- Co-operation with embassies of the Slovak Republic and their commercial sections.

The Region of Nitra

The Nitra Region in the Context of Foreign Investments

Only very few Slovak regions have such excellent preconditions for the development of international contacts and cooperations as has the Nitra region. This region extends from the mountain ranges Povazsky Inovec and Tribec in the north to the river Danube in the south and geographically it covers the prevailing part of South-western Slovakia.

This region is identical with the chamber region of the Regional Chamber of Commerce and Industry Nitra. The chamber region begins approx. 80 km easternly from the Slovak capital Bratislava and is surrounded by the other chamber regions Trnava, Trenčín, Banská Bystrica. The centre of the region is the historically famous town Nitra with approx. 82 661 inhabitants. The total geographic surface of the region represents approx. 6 344 sqkm and the number of its population is about 689 867 residents. The total number of the entrepreneurial subjects in 2011 was approx. 71 517. The traditional industrial branches of the region are the machine engineering, metal processing, electrical engineering, chemical industry, building material production and the automobile industry. Based on the excellent climatic and soil conditions very important are also the agricultural production and the food processing industry.

Concerning the size of entrepreneurial subjects there are typical here small and middle sized companies, which went through the transformation process to the market economy easier and more flexibly as many big factories in other parts of the Slovak Republic. In the recent ten years there was established here a large number of new producing companies by local Slovak entrepreneurs, which are successful not only on the Slovak but also on international markets.

The objective advantages of the region have been invented also by well-known foreign companies, from which many are present here with strong investment projects. To the most important foreign investments of the region belong such manufacturing plants as for example the HEINEKEN SLOVAKIA JSC Hurbanovo /beer and malt production/, Giesecke & Devrient Slovakia Ltd. /smart plastic cards/, MATADOR AUTOMOTIVE JSC Vrable /automobileparts/, IDO EET Ltd. /special engineering production/, SLOVENSKÉ ENERGETICKÉ STROJÁRNE JSC Tlmače /produces and supplies steam boilers for combustion of coal, oil, gas and biomass/, Duslo JSC, Šaľa /fertilizer production/, Camfil Ltd. /production of air filters/, KABELSCHLEPP SYSTEMTECHNIK Ltd. /systems of energy carriers/, Pastorkalt JSC /production and delivery of refrigeration equipment/. The most important investors came to the region from Germany, Austria and Holland. Besides these direct investments a large number of local industrial companies cooperate very intensively with partners in the European Union supplying for them semi-products or carrying out certain finalizing operations on their final products.

The region has very good transport infrastructure with dense network of roads which contributes to the further intensification of the international contacts. The administrative centre of the region the town Nitra has direct highway connection with the capital Bratislava and thus also with the Slovak-Austrian border. Thanks to this highway connection and the good geographical position three international airports /Bratislava, Vienna, Budapest/ are available within three hours. In the town Nove Zámky 30 km southernly from Nitra there is one international railway junction and in the suburb of the town Komárno is the second most important river port of Slovakia on the river Danube. After the opening of the Rhine-Main-Danube channel the region has direct ship connection with the Black and North Sea.

Nowadays, the main task of the Regional Chamber of Commerce and Industry Nitra in the international sphere is the further support of commercial and cooperational contacts between Slovak and foreign companies. This target is based on the high interest of the local entrepreneurial circles for the intensification of business contacts mainly with the countries of the European Union and of Middle Europe. It is expected that thanks to the geographical proximity and good infrastructure, this region will attract the interest of further foreign investors. Naturally, the Regional Chamber of Commerce and Industry Nitra will be always ready to equip them with basic orientation in the current Slovak environment and to provide professional advisory services in all spheres of the economic life.

The Region of Prešov

The Prešov Regional Chamber of the Slovak Chamber of Commerce and Industry

The Slovak Chamber of Commerce and Industry, an integral part of which is the Prešov Regional Chamber (PRC SCCI), is an association of business concerns formed in order to boost the economic prosperity of its members, encourage their business activities both in Slovakia and abroad and assist in the creation of a positive business climate. The SCCI is a public institution established by Act 9/1992 of the National Council of the Slovak Republic and declared in Act 121/1996 of the National Council.

Membership in the Chamber is voluntary and its members are both natural and legal persons performing business activities in various fields of economy, with exception of agriculture and food industries.

The members have the right to:

- Use all services provided by the SCCI
- Service price discounts in accordance with the chamber's valid price list of services
- Propose and elect bodies
- Submit proposals for the improvement of the chamber's activities

The primary aim of PRC SCCI is to provide high-quality services to the business community in the Prešov region, to assist in tackling their business-related problems, to predict, analyse and define the needs of entrepreneurs and to offer solutions in the form of both tested and first-time services.

Provided standard services of the SCCI's Prešov Regional Chamber:

- Issuing of ATA carnets and certificates
- Counselling and consultations related with export and import of goods
- Counselling on the possibilities of financing business activities through the Structural Funds (ŠF)
- Services in the field of education
- Development of international trade relations - by organising trade missions at home and abroad
- Organisation of the participation of companies for fairs and exhibitions
- Publishing, distribution and sale of specialised publications

The plan for the Chamber's activities for each year is approved at the plenary session of the PRC SCCI and is outlined on our web-site www.po.sopk.sk. Members of the PRC SCCI are kept regularly informed about all events organised by the Chamber.

- the territory of the SCCI's Prešov Regional Chamber is the Prešov Self-governing Region
- the PRC SCCI also has an office in Poprad

The Region of Trenčín

Location & Accessibility

- Trans-European corridors North-West
- Mutual border with Czech Republic
- 1 hour access to Capital City perspective of new corridors
- Located in the northwestern part of the Slovak Republic
- Area of 4 502 sq. kilometers
- Building materials such as dolomites, limestone, building stone, lime marl, brick raw material, and decorative stone can be found in the region. Mineral waters and thermal springs are used as a source of high-quality drinking table water. Wood resources are also of importance.

Emerging investment opportunities

Investors could find brown and green field opportunities for investments, skilled and educated labour force and well prepared infrastructure here. Active role in this area plays Trenčín Regional Chamber of SCCI in close cooperation with regional and local selfgovernmental units. It gives support to Slovak and foreign companies with regard to trade, legal, investment support. It provides legal advising and information on economic situation of the region. Special attention should be paid to the internet portal www.scci.sk run by the Slovak Chamber of Commerce and Industry, where are available practical information on business issues and companies in the region.

Social characteristics

Number of inhabitants	593 159
Share of men / women	49.04 / 50.96 %
Economic active population	50.95 %
Average age	40.68 years
Average monthly salary.....	786 €
Unemployment rate	10.89 %

Structure of education:

Vocational & professional.....	27 %
High school	29.7 %
University degree	13.9 %
Basic education	12.9 %

Economic characteristics

The region has an industrial - agricultural character. Industry is prevailing. The main industrial fields are: mechanical engineering and components production for automobile industry, chemical production - rubber and plastic articles production, electrical engineering, glass industry, wood processing industry, food processing industry and service sector with dominance of tourism.

Number of registered businesses:

• number of enterprises	13 123
• number of legal entities	18 304
• tradesmen	42 548

Active organizations classification according to size categories in Trenčín Region:

Small enterprises 0 – 19 employees and companies with unknown number of employees	
Small enterprises: 0 – 19 employees	93.30 %
Small enterprises: 20 – 49 employees	2.95 %
Middle enterprises: 50 – 249 employees	2.11 %
Large enterprises: 250 and more employees	0.64 %

Overview of the regional advantages

- good geographic location
- tradition of production
- presence of construction materials production
- good qualification level of economically active population
- well established infrastructure in the region
- availability of free areas for industrial production
- established services: banks, insurance and leasing companies, legal, engineering and project offices, exhibitions & fairs, CCI...
- good possibilities for development of tourism
- good natural conditions for agricultural production with a possibility to cultivate plants requiring higher temperature climate - cross-regional importance of hops cultivating
- woody country with favourable composition of forests
- suitable conditions for fishing and hunting

The Region of Trnava

Trnava Region

the region with its rich history, spiritual and cultural life, with fertile lowlands and protecting mountains, with rivers connecting people, the region of education, the region of good bread and good wine.

Location

Trnava region spreads across the south-western part of Slovakia. In the west it borders with the Czech Republic, in the south-west with Austria, in the south with Hungary. It takes to reach the capital Bratislava by car about 1 hour and the Vienna International Airport about 2 hours.

Trnava Region in numbers (2013)

Number of population:	556 577
Area (km ²):	4 146
Number of profit companies:	14 963
Number of physical persons /small entrepreneurs/:	41 521
Rate of unemployment (%):	11.4

Taking into account the big investment of PSA and Samsung Electronics Slovakia the Trnava region becomes one of the most dynamic regions in Slovakia.

Transport and infrastructure

The region has a well-developed road and railway transport system. Railways and highways connect the region of Trnava with Bratislava, Czech Republic, Austria and Hungary.

Education

In Trnava region there are a great number of technical and vocational schools provide machinery, transport, electrical, chemical, agriculture, food-preparation and other kinds of education. Secondary schools are aimed at business and services. The Slovak Technical University in Trnava offers degrees in industrial technologies, technical materials, industrial ecology, management and applied information systems. The Trnava University and The University of St. Cyril and Method offer possibilities to study in a large scale of humanities and natural sciences.

Economy

The region of Trnava has its tradition in both kinds of production: industrial and also agricultural. The industrial production

includes machinery, /automobile industry/, electrical engineering, chemistry, glassmaking, printing, food industry. The main industrial centres are these towns: Trnava, Skalica, Senica, Galanta, Piešťany and Hlohovec. The industry of agriculture and food is developed especially in the southern districts of Galanta and Dunajská Streda. The region of Trnava is a significant source of energy production for the whole area of Slovakia with its Nuclear Power Plant Jaslovské Bohunice and Water Power Plant in Gabčíkovo.

The Region of Zilina NORTH-SLOVAKIA COUNTY

The situation of Slovak Republic's economy is frequently discussed in Slovakia and abroad, and the debate is greatly confused. The analysis is often mixed up with wishful thinking, simple lobbyism etc. A few neutral figures:

GDP IN CONSTANT PRICES – changes in %
Slovakia

EXCHANGE RATE - Month - VI.
SKK / 1 CZK, Slovakia: Czechia
brief history

Twenty-one years have elapsed since the Slovak Republic acquired independence. In these approximately 21 years the Slovak Republic had to prove evidence of its capability to manage the development of the county, assuring its political stability and economic development.

After three years of independence, the economy of the Slovak Republic acquired from the London „The Economist Intelligence Unit“ the best rating among Czech Republic, Poland and Hungary - countries in transition. The rating was supported mainly by agreed aims and practical economic policy of individual states within the goals of the International Monetary Fund, macro-economic indicators etc.

The Slovak Chamber of Commerce and Industry (SCCI) as a public - legal institution plays the role of the major representative of the entrepreneurial and business sphere in the Slovak Republic. The Regional Chamber of the SCCI in Zilina represents and co-ordinates the interests of its members in matters of business activity inland and abroad, renders services and protects them from unfair business relations in the following districts : Zilina, Martin, Dolný Kubín, Liptov. Mikuláš, Turčianske Teplice, Ružomberok, Čadca, Namestovo, Tvrdošín, Bytča, Kysucké N. Mesto. The members of Regional Chamber SCCI Zilina come from the most industrial sectors including engineering, machinery, metallurgy,

building industry, wood processing, paper industries, chemical industries, textile, food industries, electrotechnical, electronic industries, automotive, energy, tourist and travel, etc. **The most important companies**, suppliers, hotels, spa of Zilina County in that branches you can watch in "CATALOGUE FIRMS of SCCI Zilina County" – issue by chamber of commerce and industry Zilina.

Our County located at the North-West of Slovakia is one of the most industrialized areas in the republic. Zilina is the city of the County. The region is connected to the international trucks roads, Core European Corridors:

- I. **E 50:** ...-Paris-Praha-Brno-Zlín-Zilina-Martin-Ružomberok-Liptovský Mikuláš-Presov-Košice-Kyjev,...and
- II. **E75:** - Koper-Wien-BA-/...-Belgrade-Szeged-Bratislava-Zilina-Zwardon-Biala-Katowice/Krakow-Warsaw-Minsk-Moscow...)
- III. **R3/59/65:** Krakow-D.Kubín-Martin-Kremnica-Zvolen-Budapest

North-Slovakia is a transport junction of international railways systems in the direction Poland, Czechia, Ukraine or to south – Hungary, former countries of Yugoslavia, etc. Air transport is secured via the International **Airport at Zilina**. The distance of the Airport from Martin is 37 km, to Liptov 70 km.
